	aspenONE Unified GDOT Builder 64-bit	Aspen GDOT for ISPs 32-bit	Aspen GDOT Online 32-bit	Aspen GDOT Offline 32-bit
<p>* In general, AspenTech aspenONE® software license agreements with customers permit use of the licensed software on Supported Computers at customer Sites. "Supported Computers" include computers with a manufacture, model and operating system for which AspenTech offers a supported version of the software, and that are controlled by the customer. "Sites" are customer facilities or locations specified in the license agreement.</p> <p>AspenTech permits customer use of licensed aspenONE software in the cloud where: (i) the Platform Support specifications published by AspenTech for the relevant version of the software product include cloud support; (ii) only the customer has access to the licensed software hosted by the cloud service provider; and (iii) the user is accessing the software only from a Site specified in the applicable license agreement.</p> <p>Cloud deployment does not change any license restrictions, including the restrictions on which regions can access the software.</p>				
When running software on a virtual machine, the machine should meet the same requirements.				
AspenTech does not support the in-place upgrade of the Operating System (for example: upgrade Windows 7 to Windows 10) with AspenTech software already installed. Our recommendation is to uninstall Aspen Software before upgrading the OS and reinstall it after the upgrade.				
Your Aspen SLM Server must be installed and running prior to installing any V12 product.				
If running standalone, 1280 x 800 is the minimum recommended resolution monitor for servers.				
For SLM server using Type 1 Desktop configuration, the minimum memory is 4GB with 20GB hard drive.				
Microsoft Active Directory/Domain Services (Required for aspenONE Web Server)				
A minimum of 10GB of free space is needed to install/upgrade products.				
²⁵ Only the version of MS Edge that uses the Google Chrome engine is supported
